The COMBO Dual Therapy Stent combines a pro-healing antibody coating on the luminal surface, to accelerate endothelial coverage through the capture of endothelial progenitor cells (EPCs), together with drug elution on the abluminal surface, to control neo-intimal proliferation, offering the unique solution for true vessel healing. COMBO provides a safe, no compromise solution for physicians and their patients.

**Aboluminal effect**
- Controls neointimal proliferation
- Drug eluted by 30 days

**Luminal effect**
- EPCs are captured by antibodies
- EPCs differentiate into endothelial cells
- A natural, functional architecture is formed

**Bioresorbable Polymer Matrix**
- Full and complete polymer degradation within 60 days

**Dual Helix Stent Design**
- Unobstructed sidebranching
- Natural conformability

**Regenerate Endothelium**

**Unique Neointimal Regression**
- Neointimal Thickness (mm)
- Neointimal Volume (mm³)

**Low Event Rates at 4 Years**
